

Vetiver Grass

A Living Barrier Conserving and Returning Nature to the Land “The prevention of Soil Degradation and Erosion”

Recognizing the problem of the loss of top soil and soil erosion, His Majesty the King initiated studies and experiments on the use of vetiver grass, known in Thai as “ya faek” as a potential solution that is both economical and friendly to the environment.

The research revealed that vetiver grass promote:

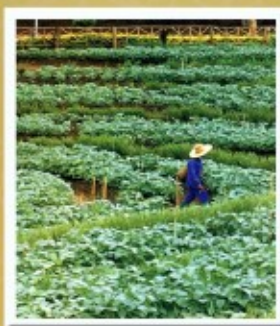

1. Soil and water conservation
2. Soil rehabilitation
3. Environment protection

Keep soil moisture in orchard

Soil and water conservation

Keep soil moisture in vegetable

Reduce the speed of water run off

Collect sediments

Increase organic matter

Absorb water - borne soil and toxic substances
